Project Scheduling

Scheduling is essential to the successful outcome of Construction Management and the Construction operation as a whole. Keeping projects on track and effectively and efficiently leading to a quality product with a completely satisfied client.

All projects are coordinated through the local, state, and federal regulatory agencies. Specific concerns that will be addressed regarding regulatory agencies is OSHA, and the Americans with Disabilities Act for all new building construction and renovations, For Utility construction special attention will be made to open trench protection and shoring.
